

San Felipe Street, Sage Road to IH 610 Houston, Texas

CobbFendley provided CM&I services for the reconstruction of a 5-lane concrete boulevard section to 6-lane concrete boulevard section. The project included installation of approximately 2,000 linear feet of storm sewer. The project also included traffic signal modifications.

The construction drawings called for the intersection of Post Oak Boulevard and San Felipe Road to be completed in ten phases. In a time savings proposal submitted by CobbFendley, the intersection was closed over four weekends and **reconstructed minimizing the amount of time traffic was disrupted.**

CobbFendley's Resident Engineers achieved the following:

- Effectively managed the owner's costs
- Met construction schedules
- Coordinated construction activities
- Minimized the impact of the construction to the general public
- Worked with the contractor to resolve construction conflicts and to ensure safety

Project Cost:

\$15 Million

Completion Date:

June 2010
